SUMMARY

Senior Full Stack Engineer with 15+ years of experience building scalable SaaS applications, AI-powered solutions, and enterprise systems using JavaScript, TypeScript, React, Next.js, Node.js, and Python. Expertise spans microservices, cloud-native applications, and high-performance web platforms across fintech, analytics, media streaming, and executive consulting. Strong background in AI integration, machine learning workflows, REST and GraphQL APIs, React Native, team leadership, CI/CD optimization, and secure production deployments on AWS and Azure.

IMPACT

Full-Stack Delivery

Built B2B SaaS platforms with React, TypeScript, and Node.js microservices serving thousands of active users.

Healthcare Platform Impact

Delivered a HIPAA-compliant multi-tenant SaaS B2B platform handling 150K+ annual patient sessions, reducing clinician intake workload 40% through automation.

Fintech Transaction Systems

Supported transaction processing systems handling \$50M+ monthly volume with sub-4-second settlement and performance optimization resulting in 32% cost reduction.

Cloud Modernization

Migrated legacy systems to AI-integrated microservices using Docker and Kubernetes, cutting deployment time 70% and achieving 99.9%+ uptime.

CORE TECHNOLOGIES

Backend: Node.js, NestJS, Express.js, Python FastAPI Django Flask, .NET Core, REST APIs, GraphQL

Frontend: TypeScript, JavaScript, React, Redux, Next.js, Angular, React Native, Tailwind, MUI, TanStack

Cloud & DevOps: AWS, Azure, GCP, Docker, Kubernetes, CI/CD, Terraform, GitHub Actions

Architecture & Engineering: Microservices, Multi-Tenant SaaS, Event-Driven Systems, Kafka, RabbitMQ, API Integration, Automated Testing, Git, Code Reviews, Agile Scrum, System Design, Mentorship

Databases: PostgreSQL, MongoDB, SQL Server, MySQL, Redis

AI & Automation: AI Integrations, LLM Integration, Machine Learning, Prompt Engineering, Predictive Modeling, Intelligent Automation Workflows

Testing and QA: Jest, Cypress, React Testing Library, Mocha, PyTest, Jasmine, Karma, Protractor

Security & Compliance: System Architecture, Security SOC2 XSS CORS, Web Accessibility WCAG, Agile Scrum, Mentorship, Code Reviews

WORK EXPERIENCE

Senior Full Stack Engineer, Roebling

01/2022 – 02/2026 | New York, NY

- Led development of AI-powered executive assessment platforms using TypeScript, Next.js, Python, and React Native, enabling real-time analytics and intelligent reporting systems
- Designed scalable backend services with Python and FastAPI integrated with OpenAI-based AI workflows, improving automation efficiency by 40%
- Built responsive cross-platform mobile applications with React Native for executive coaching and business intelligence, delivering faster access to insights for users
- Architected cloud-native infrastructure on AWS using Docker and Kubernetes, achieving highly available and secure deployments.
- Developed reusable frontend systems with Next.js and TypeScript, improving maintainability and reducing development time by 30%.
- Implemented CI/CD pipelines with GitHub Actions and automated testing workflows, significantly improving release reliability and deployment frequency
- Mentored engineering teams on designing robust architecture, integrating AI services, and applying modern TypeScript practices with Next.js and NestJS, which improved code quality and accelerated feature delivery

Senior Full Stack Developer, Napster

03/2016 – 12/2021 | Los Angeles, CA

- Developed high-performance music streaming and subscription platforms using TypeScript, Next.js, PHP, and Python, serving millions of active users
- Integrated machine learning recommendation systems to personalize user content and improve engagement metrics by 35%
- Built scalable RESTful APIs and backend services with Python and PHP, optimizing media delivery and streaming reliability
- Led frontend modernization initiatives using Next.js and React, improving SEO, rendering performance, and user experience
- Implemented analytics pipelines and recommendation engines with Python, Pandas, and TensorFlow, increasing personalized content clicks by 25%
- Optimized CI/CD workflows and cloud infrastructure deployments across AWS environments, reducing deployment times by 60%
- Collaborated with product and design teams using Agile Scrum and MUI to build cross-platform digital experiences, delivering features faster and receiving positive user feedback

Full Stack Developer, Basen

02/2012 – 02/2016 | San Francisco, CA

- Engineered enterprise SaaS applications using TypeScript, React, Next.js, Python, and Django for large-scale business clients, delivering faster feature deployment and improved operational efficiency
- Developed AI-integrated analytics dashboards and intelligent reporting systems using Python and machine learning libraries, providing stakeholders with actionable insights that accelerated decision-making
- Built interactive frontend interfaces with React and Next.js and maintained scalable backend services with Django REST Framework, resulting in smoother user experiences and reduced page-load times
- Designed and optimized PostgreSQL and MongoDB database architectures for high-volume transactional systems, improving data retrieval speed and supporting overall system reliability
- Integrated AI-powered automation tools to streamline reporting and reduce manual processing workloads by 35%
- Containerized applications with Docker and deployed them on AWS, cutting deployment time and increasing system reliability
- Improved application scalability and maintainability through reusable component architectures and modern TypeScript standards

Junior Full Stack Developer, Splunk

06/2007 – 01/2012 | San Jose, CA

- Developed enterprise monitoring and analytics applications with React, TypeScript, and Node.js for large-scale data processing systems, delivering faster insight generation for users
- Built reusable UI components and dynamic dashboards with React, improving frontend consistency and maintainability
- Designed RESTful APIs and backend microservices with Node.js and Express.js, supporting real-time analytics workflows and reducing data retrieval latency
- Integrated authentication and authorization systems using OAuth and JWT security standards, strengthening application security and simplifying user access management
- Optimized frontend rendering performance and backend query efficiency, reducing application response times by 30%
- Collaborated with senior engineers in Agile Scrum teams, using Git and Azure DevOps for code reviews and architecture discussions, which helped align the project design and improve code quality
- Assisted in building CI/CD pipelines with Jenkins and Azure Pipelines, and set up automated testing using Jest and Cypress, which increased release reliability and reduced manual testing effort

Software Engineering Intern, Nasdaq

05/2006 – 05/2007 | New York, NY

- Assisted in developing internal financial applications with JavaScript, React, and Django, writing unit tests and integrating CI/CD pipelines to ensure reliable releases
- Built reusable Angular UI components and TanStack dashboards that visualized real-time financial data, enabling analysts to generate reports more efficiently
- Supported backend API development and PostgreSQL integration using Django, implementing API-integration patterns that reduced data latency for downstream services
- Collaborated with engineering teams to refactor code and add automated tests, improving application usability and reliability as reflected in fewer support tickets
- Participated in debugging, testing, and deployment within Agile sprints, contributing to successful releases through CI/CD pipelines
- Enhanced internal documentation and modernized the frontend with Angular and TanStack, which streamlined development and reduced new-developer onboarding time

Education

Bachelor's Degree, Mercy University

08/2002 – 12/2006 | New York, NY
